Smart Bedside Solutions

Patient Concierge Service

Bedside Station is patient infotainment terminal, customized to patient-centered. It installed a bedside for hospital inpatients and provide the work efficiency to the hospital staff.

1) The patient just stays their bed and only touch the screen to request the service such as change the fluid, bed sheet, cleaning, issuing certificate and medical record. Also, available to check the total amount of bill and remain balanced.
2) Hospital staff can work more efficiently with fewer efforts by PACS and guidance of Hospitalization and Discharge. Also, improve communication between patient and medical staff.
3) Bedside Station provides various information such as patient schedule, medicine information and operation progress for the patient caregiver.
4) Patient can order meal and menu, also use TV and internet service through Bedside Stations

Because of the smart bedside, the hospital life was not boring. I could watch the TV conveniently and request a meal to the nurse. I knew well what medicine I was eating.

Medical Smart Solution

There is no need to enter information or connect devices to monitor fluid. It starts just by applying IV.

It can be run alone without a server connection. Once connected to the server, the entire administration can be monitored centrally. Supports changes to monitor only responsible patients.

It supports traceability for up to 2 hours of movement. You can extend the travel time by connecting an additional external battery. Future upgrades will help wheelchair and bedding installations.

Designed for various situations. Supports secure tracking while on the move. Damage and contamination prevention, and network instability.

Do you need additional features? Now we are listening to you to develop a complete solution. If you have any questions, please contact sales@smartbedside.com.

With Smart Pole, patients will be visited by nurses before the end of the infusion. It has an alarm system that the patient can immediately understand if the fluid velocity is abnormal or stops. With future mobile applications, you do not have to worry about when you will end up paying anymore.

We have created a Smart Pole that reflects the various opinions of the hospital. Patients are wondering if the fluid is running regularly, and nurses must constantly visit because of the fluid they need to monitor for long periods. We have developed an affordable and reliable solution to solve these problems.

A convenient and robust solution is Smart Pole.
